

ENVIRONMENTAL POLICY

We are aware of our impact on the environment that results from the production of iron castings and industrial valves as well as our location on the outskirts of Table Mountains (Gory Stolowe) National Park; therefore, we strive to optimise our processes. Care for the environment is an important part of our Company's development strategy.

We are committed to comply with all legal requirements and other environmental regulations applicable to the environmental aspects we have identified that result from performed processes.

Zetkama will continue to improve processes and develop products in order to meet customer requirements and systematically reduce the negative impact on the environment by:

- *design of products in a way that will minimise their impact on the environment in the process of production, use and disposal;*
- *prevention of pollution "at the source" wherever and whenever possible;*
- *applying the supplier qualification system, which will ensure the product is meeting customer's requirements and has minimum environmental impact;*
- *rational use of raw materials and power utilities;*
- *search for new technologies and methods that limit the exploitation of the environment and are economically justified;*
- *minimisation of the risk of environmental damage, closely planning the prevention of accidents and the reduction their effects;*
- *increase the ecological awareness of the staff;*
- *continual improvement of the Environmental Management System efficiency;*
- *creation of an environmentally friendly Company image.*

This environmental policy is available to the public and Company employees are familiar with it.

Leszek Jurasz

*President of the Board
General Director*
